

Program	PN - CEEX 631
Project title (ENG):	Promotion of innovative and sustainable technologies for drinking water treatment (PROAQUA)
Project title (RO):	Promovarea tehnologiilor inovative si durabile pentru tratarea apei destinate consumului uman (PROAQUA)
Duration	2006-2008
Team Leader	Cristiana COSMA
Summary (short description) ENG	<p>The activities of the project aimed optimization of drinking water present system optimization in order to be in compliance with national and European norms specially referring to developing/implementation of some efficient and sustainable technologies for water treatment according with specific pollution matrix of raw water. Thus, the followings activities were performed:</p> <ul style="list-style-type: none"> • Technical analyse of available data on national level regarding the quality of natural sources • Diagnostic analyse by direct control of water quality on treatment flows • Representative case study selected for optimization/upgrading of treatment flows according with pollutant nature/ type /no complying micro pollutants (raw water/drinking water), frequency, toxicity a.s.o.; • Mobil pilot installations, in continuous flow operating system, having new modules, purchased in the frame of PROAQUA project (installation for ClO₂ generation-dosage, microfiltration + ultrafiltration installation), used for application on field; • Frame methodology to test the technological options for groundwater and surface water treatment on pilot installations; • Alternative technologies for the treatment of underground and surface water with specific pollution matrix (industrial pilot level, laboratory pilot level): ground water with iron, manganese ± ammonia content (medium/low load); ground water with nitrate content (high load); surface water with THM's precursors content (including also technical documentation for DWTP); surface water with low turbidity and associated organic/bacterial load. • Frame scheme referring to the management of chemical sludge and washing water from potabilization treatment flows including treatment technological flows for treatment, recovery of useful elements (Al/Fe); • Technological zone network of excellence (www.potabilizare.ro) for N+V, V areas in order to aggregate the competence from environmental field and to transfer the knowledge to sector level.
Summary (short description) RO	<p>Activitatile desfasurate in cadrul proiectului au vizat optimizarea sistemului de management al apei destinate consumului uman in vederea conformarii cu reglementarile nationale si cele europene in vigoare, cu referire speciala la dezvoltarea/implementarea unor tehnologii eficiente si durabile de tratarea in concordanta cu matricea de impurificare a resurselor de apa bruta. Astfel, au fost realizate:</p> <ul style="list-style-type: none"> • Analiza tehnica a datelor disponibile la nivel national privind calitatea resurselor naturale • Analiza diagnostic prin controlul direct al calitatii apei pe filiere de tratare • Studiile de caz reprezentative selectate pentru optimizarea/ completarea fluxurilor de tratare, functie de natura/tip poluanți/micropoluanti neconformi (apa bruta/apa potabila) frecventa de aparitie, toxicitate etc • Instalatii pilot mobile, cu functionare continua, avand in componenta module noi, achizitionate in cadrul proiectului (instalatie de preparare-

	<p>dozare ClO₂, instalatie de microfiltrare + ultrafiltrare) pe care s-au efectuat experimentari in teren</p> <ul style="list-style-type: none"> • Metodologie cadru pentru testarea variantelor tehnologice de tratare ape subterane si de suprafata pe instalatii pilot • Tehnologii alternative de tratare surse subterane si de suprafata cu impurificare specifica (testate la nivel pilot industrial, pilot laborator): ape subterane cu continut de fier, mangan ± amoniu (incarcare medie/redusa), ape subterane cu continut de azotati (incarcare ridicata), ape de suprafata cu continut de precursori ai THM, ape de suprafata cu turbiditate redusa si incarcare organica/ bacteriologica asociate • Schema cadru privind gestionarea namolurilor chimice si a apelor de spalare din fluxurile de potabilizare, inclusiv fluxuri tehnologice de tratare, recuperare elemente utile (Al/Fe); • Retea tehnologica zonala de excelenta (www.potabilizare.ro) pentru regiunile N+V, V in vederea agregarii competenteelor in domeniul, transfer de cunostinte la nivel de sector.
